

## ENVIRONMENTAL POLICY - EXTEN SA

The management of EXTEN SA pursues an environmental policy to minimize the impacts that processes, manufacturing, materials used and logistics have towards both the internal environment and the external environment.

Compliance with current regulations must be the starting point for continuous improvement of company performance from an environmental point of view.

The study of this improvement and the use of the best technologies available on the market must be a constant goal of the staff of EXTEN SA, also in the design phase of new products.

The fundamental objectives identified and defined to be constantly monitored and improved in the coming years are as follows:

- reduction of water consumption
- reduction of energy consumption
- reduction in the quantity of waste produced
- reduction in the amount of production scrap
- reduction of noise emissions

The awareness, information and training activities of personnel at all levels, with the related implementation plan, are considered functional to the achievement and maintenance of these objectives.

The specific values for each fundamental objective are defined annually by the Management and reviewed periodically.
